

levels, while color, ammonia, and manganese were below the compliance levels. The results from this study revealed further the potential of aluminium and titanium electrode materials for the purification of poultry slaughterhouse wastewater; with a high potential of performing impressively with other types of wastewaters.

Author Contributions: Conceptualization, K.M.; methodology, K.M.; software, T.B., R.O., K.M. and A.T.; validation, A.T., T.B., A.D. and N.M.; formal analysis, K.M.; investigation, resources, and data curation, K.M., T.B., R.O., T.M. and A.A.; writing—original draft preparation, K.M.; writing—review and editing, K.M., A.A. and N.N.; visualization, N.N.; supervision, project administration, and funding acquisition, K.M. All authors have read and agreed to the published version of the manuscript.

Funding: This research was funded by the Ministry of Education and Science, the Republic of Kazakhstan to support “Reducing the technogenic impact on water resources with using water recycling technology”, № BR05236844 /215 for 2018–2020 years.

Conflicts of Interest: The authors declare no conflict of interest. The funders had no role in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript, or in the decision to publish the results.
