

to serve as a useful material for salts adsorption. On other hand, the values of adsorption capacity and charge efficiency are in good agreement with previously published data, which confirms a high performance of the systems designed.

### Acknowledgments

The authors are grateful to Prof. Francois Béguin and Dr. Paula Ratajczak from Poznan University of Technology for their kind assistance during this work. Ministry of Education and Science of the Republic of Kazakhstan financially supported this work, Project No. AP08956403.
